

Presentation:

- Data Source:
 - From where, why was this selected
 - Salary_data.csv → contains information about the job positions and compensation, as well as years in the company etc...
 - Participans_data.csv → contains specific information about the participants of the survey, like gender, study level, and race
- Data Cleanup
 - Explain what methods were used to clean up the data set and why we wanted the information to be shown a certain way.
- Questions the dataset will answer
 - Will salary for Data Science jobs continue to experience growth in the future?
 - Always interested to know if your job will continue to be relevant within the industry for the future.
 - Based on the selected set of variables, what is the expected salary range?
 - Obviously we are only taking into account certain things within the big range of variables that are taken into account when offering a salary for a certain job opening.
 - Determine salary trends based on specific factors.
 - Can we determine the trend? Is every state/city/company following this same trend, or is it different?
