

Presentation:

- Provide quick overview on presentations slide (show every chart and provide description)
- Switch over to Dashboard story and present the first set of charts. Show interactable elements.
- Explain two charts and provide a question to the audience to consider when applying to a job in any of those states. (consider cost of living, etc.)
- State that now is a better time than ever to consider a career in this field and provide evidence in support.
- Show the second set of charts.
- Provide information on these charts as well as point out that the top chart is a miscellaneous, fun chart. This data would show where the highest compensations would be per state.
- Show a third set of charts which show ML content based off of ML code.
- Show a fourth set of charts which show companies you should avoid applying to as their compensations are constantly dropping over the last 2 years or so. These are usually major companies people would consider applying to anyways.
- Close off the presentation and ask the audience if they have any questions.

A script has been created for my personal use for this presentation to allow it to go smoother and practice.

These notes are for your reference as to what I will be talking about during the presentation of my part of the project.
